ADITYA SINGH

Addy502 | Aditya Singh | adityasingh0524@gmail.com | +91 98717 14782 | Noida, India

Summary

Computer Science student with hands-on experience contributing to enterprise application development, process automation, data reconciliation, and AI-driven solutions through internships and project work. Experienced in developing solutions for enterprise workflows, automating operational processes, analyzing and reconciling large datasets, and applying intelligent methods to practical problems in banking and technology environments. Interested in building practical solutions that improve efficiency, simplify complex processes, and address real-world problems.

Areas of Interest

ServiceNow, **Workflow Automation**, **Artificial Intelligence**, **Machine Learning**, **NLP**, **Data Analysis**, **Enterprise Application Management**

Experience

Publicis Sapient
Engineering Application Management & General Support Aug 2026 – Present

- Developing **ServiceNow** applications and workflows for **process automation** and application management.
- Built a **Password Reset Manager** in ServiceNow to automate password reset requests through **workflow-based automation**, incorporating request handling, conditional logic, and automated process flows.
- Designed and implemented **automated password reset workflows** using **ServiceNow Flow Designer**, including branching, sequential, and conditional workflow logic.
- Developed and refined **ServiceNow dashboards and reports** to visualize application and operational data, designing tiles and visualizations for incident tracking, configuration analysis, and workflow-related metrics.
- Worked on **dashboard data configuration and visualization**, using filters, sorting, data sources, and appropriate visualization types to present operational insights effectively.
- Designed a **gamified ServiceNow application**, implementing **stage progression, conditional logic**, and workflow-driven game flows.

Axis Bank
IT Intern Feb 2026 – Jul 2026

- Worked on the implementation of **AI and ML for banking use cases**, including **Agentic AI, Conversational AI, Speech-to-Text, Text-to-SQL, and NLP**.
- Developed **Python**-based automation scripts to reconcile enterprise user identities across **Active Directory, Ranger**, and internal application datasets.
- Automated **user access validation, dormancy checks, and cross-system account reconciliation** using **Python and Pandas**, reducing manual verification effort.
- Built **data processing pipelines** to clean, merge, and analyze large CSV datasets for user account auditing and reconciliation reporting.
- Integrated reconciliation workflows within the **Cloudera CDP** ecosystem, working with services such as **Hive, HDFS, Atlas, NiFi, and Ranger** using **Linux and Kerberos** authentication.
- Generated **consolidated reconciliation reports** and automated validation workflows to improve accuracy and operational efficiency in identity management.

Projects

Banking Ticket Intelligence GitHub

- Developed a **Python-based machine learning system** for analyzing banking support tickets and predicting potential delays and resolution times.
- Applied **TF-IDF** for NLP-based feature extraction and trained **Random Forest** models for delay classification and resolution-time prediction.
- Implemented **automated action recommendations** based on ticket status, priority, and predicted delay.
- Generated **operational insights and data visualizations** using Matplotlib to support ticket analysis and decision-making.

Fraud Risk Scoring ML GitHub

- Developed a **machine learning model** for fraud risk scoring using highly imbalanced credit-card transaction data.
- Performed **feature engineering and data preprocessing** and applied **class-weighted Logistic Regression** to address class imbalance.
- Evaluated model performance using **precision-recall metrics** and tuned the decision threshold to achieve approximately **80% fraud recall and 44% precision**.
- Optimized the classification threshold to balance **fraud detection** with false-positive reduction.

Cats and Dogs Image Classifier GitHub

- Developed a **Convolutional Neural Network (CNN)** for binary image classification of cats and dogs.
- Implemented an image classification pipeline for **image preprocessing, model training, and prediction**.

Finance Tracker GitHub

- Created a finance tracker with **income and expense tracking**, credit score monitoring, and receipt tracking.
- Implemented **bar and pie chart visualizations** for financial data analysis.

Certifications

The Complete ServiceNow Developer Course Certificate

The Complete ServiceNow System Administrator Course Certificate

PBEL Equivalent to 6 weeks Virtual Internship via FSP - Artificial Intelligence from IBM Certificate

Achievements

Awarded **Best Parliamentarian – Male** at **Youth Parliament**, organized by the Verbitron Club, Department of Computer Science and Engineering

First Runner Up at DebateSphere in college debate on the topic *'Trade vs Tirade - Should India Fight back with Tariffs in a Global Economy?'*

Best Debater on *'Impact of Technology on Happiness and Social Behaviour'* jointly organized by the department of Mechanical and Civil Engineering

Positions of Responsibility

Anchor and Speech Writer at HackIndia Spark 8 2025 organized at Lloyd Institute of Engineering and Technology

Education

2023 – 2027	**B.Tech in Computer Science and Engineering** Dr. A. P. J. Abdul Kalam Technical University, Lucknow *Aggregate: 66.55% (through Semester 6)*	
Class XII	**Rishabh Public School, Mayur Vihar**	63%
Class X	**Somerville School, Noida**	86%

Skills

Programming Languages: Python, C, C++, Java
Service Management: ServiceNow, Flow Designer, Workflow Automation
AI & Machine Learning: Machine Learning, NLP, Agentic AI, Conversational AI, Text-to-SQL
Data & Analytics: Pandas, Scikit-learn, Streamlit, Matplotlib, Data Analysis
Big Data & Distributed Systems: Hadoop, HDFS, Hive, Cloudera CDP
Data Engineering & Automation: Apache NiFi, Apache Atlas, Apache Ranger, Active Directory
Web Technologies: HTML, CSS, JavaScript
Systems & Security: Linux, Kerberos
Concepts: Object-Oriented Programming, Data Structures, Discrete Mathematics
Soft Skills: Public Speaking, Debating, Team Collaboration
